TABLE OF CONTENTS.....	i
LIST OF FIGURES	iii
LIST OF TABLES.....	v
SECTION 1 - INTRODUCTION.....	1
SECTION 2 - LINEAR ELASTIC STRESS-STRAIN BEHAVIOR	3
EQUATIONS OF ELASTICITY.....	3
RELATIONSHIPS AMONG ELASTIC PARAMETERS	4
POISSON'S RATIO	5
Concrete	5
Steel.....	5
Soils - Drained and Undrained Conditions	5
Rock Masses.....	6
YOUNG'S MODULUS.....	7
Concrete	7
Steel.....	8
DEFINITIONS OF YOUNG'S MODULUS FOR SOILS.....	8
Sands and Gravels - Drained Conditions	10
Silts - Drained Conditions.....	18
Clays - Drained Conditions.....	20
Clays - Undrained Conditions	25
Rocks - Drained Conditions.....	25
SECTION 3 - HYPERBOLIC STRESS-STRAIN RELATIONSHIPS	29
Compacted Soils - Drained Conditions	33
Naturally Occurring Sands - Drained Conditions.....	33
Compacted Clayey Soils - Undrained Conditions	33
Naturally Occurring Saturated Clays - Undrained Conditions.....	49
SECTION 4 - STRESS-DEPENDENT POISSON'S RATIO	51
Sands and Gravels – Drained Conditions	51
Compacted Clayey Soils - Undrained Conditions	52
Saturated Soils - Undrained Conditions	52
SECTION 5 - BULK MODULUS RELATED TO σ_3	54
Drained Conditions.....	54
Compacted Clayey Soils - Undrained Conditions	55
Saturated Soils - Undrained Conditions	55
SECTION 6 - BULK MODULUS RELATED TO σ_M	57

Drained Conditions.....	57
SECTION 7 - MOHR-COULOMB PLASTICITY	59
Drained Conditions.....	59
SECTION 8 - MODIFIED CAM CLAY - INTRODUCTION.....	62
CAM CLAY TERMINOLOGY USED IN SAGE	62
CAM CLAY PARAMETER VALUES	64
SECTION 9 - PERMEABILITY OF SOILS	67
VALUES OF PERMEABILITY.....	67
METHODS OF MEASURING OR ESTIMATING VALUES OF K.....	68
Estimating Values of k Based on Grain Size	70
Effects of Stratification.....	73
Laboratory Measurements of Permeability	75
Constant - Head Permeability Tests	75
Falling - Head Permeability Tests.....	75
Determining Permeability Values from Consolidation Test Results.....	77
Factors Affecting the Accuracy of Laboratory Tests	78
Field Measurements of Permeability.....	79
Borehole Flow Tests	79
Field Pumping Tests	82
REFERENCES	83
APPENDIX – UNITS CONVERSION FACTORS.....	87

LIST OF FIGURES

Figure 1. Stress-strain behavior of soils.....	9
Figure 2. Correlation between modulus of compressibility and average value SPT blow count (after D'Appolonia, et al., 1970).	11
Figure 3. Variation of tangent constrained modulus values with relative density for sands (after Janbu, 1985).....	14
Figure 4. Relationship among SPT blow count, overburden pressure, and relative density for sands. (after Gibbs and Holtz, 1957, and Bureau of Reclamation , 1974).....	15
Figure 5. Relationship among CPT cone resistance, overburden pressure, and relative density of sands (after Schmertmann , 1975).....	16
Figure 6. Variation of tangent constrained modulus values with porosity for silts (after Janbu, 1985).....	19
Figure 7. Variation of compression ratio with natural water content for normally loaded (normally consolidated) clays (from Lambe and Whitman, 1969).	21
Figure 8. Variation of tangent constrained modulus values with natural water content for clays (after Lambe and Whitman, 1969).	22
Figure 9. Variation of tangent constrained modulus values with in situ water content for clays (after Janbu, 1985).	24
Figure 10. Chart for estimating undrained modulus of clay (after Duncan and Buchignani, 1976).....	26
Figure 11. Value of Young's modulus for intact rock, based on classification and compressive strength (after Deere, 1968 and Peck, 1976).....	27
Figure 12. Modulus reduction ratio as a function of RQD (after Beniawski, 1984, as presented by Reese and O'Neill, 1988).	28
Figure 13. Determination of hyperbolic stress-strain parameters from triaxial stress-strain data (from Wong and Duncan, 1974).	30
Figure 14. Variation of initial tangent modulus with confining pressure for Oroville dam shell material (GP-6). (from Wong and Duncan, 1974).....	31
Figure 15. Moisture - density relationships for compacted Pittsburg sandy clay (after Kulhawy, Duncan and Seed, 1969; Wong and Duncan, 1974).....	37
Figure 16. Strength parameters for compacted Pittsburg sandy clay tested under UU test conditions (after Kulhawy, Duncan and Seed, 1969; Wong and Duncan, 1974).	38
Figure 17. Modulus parameters for compacted Pittsburg sandy clay tested under UU test conditions (after Kulhawy, Duncan and Seed, 1969; Wong and Duncan, 1974).	39
Figure 18. Moisture-density relationships for compacted sandy clay No. 1, Somerville dam.	40
Figure 19. Strength parameters for compacted sandy clay No.1, Somerville dam.	41
Figure 20. Modulus parameters for compacted sandy clay No.1, Somerville dam.	42
Figure 21. Moisture-density relationships for compacted sandy clay No. 2, Somerville dam.	43
Figure 22. Strength parameters for compacted sandy clay No.2, Somerville dam.	44
Figure 23. Modulus parameters for compacted sandy clay No.2, Somerville dam.	45

Figure 24. Moisture-density relationships for compacted sandy clay No. 3, Somerville dam.....	46
Figure 25. Strength parameters for compacted sandy clay No.3, Somerville dam.....	47
Figure 26. Modulus parameters for compacted sandy clay No.3, Somerville dam.....	48
Figure 27. Poisson's ratio parameters for compacted Pittsburg sandy clay tested under UU test conditions (after Kulhawy, Duncan and Seed, 1969; Wong and Duncan, 1974).....	53
Figure 28. Bulk modulus parameters for compacted Pittsburg sandy clay under UU test condition (after Kulhawy, Duncan and Seed, 1969; Duncan et al., 1980).....	56
Figure 29. Void ratio - log pressure relationships.	63
Figure 30. Approximate Relationship Among Permeability, D50, and Cu (after Powers and Burnett, 1986).	71
Figure 31. Variations of permeability with depth in a sand deposit (after Sudicky, 1986).....	74
Figure 32. Constant - head permeability test.	76
Figure 33. Falling - head permeability test.	77
Figure 34. Borehole permeability test.....	81

LIST OF TABLES

Table 1. Empirical relationship between ϕ and ν	6
Table 2. Variation of E_s / M with ϕ	12
Table 3. Values of Janbu's modulus number (m) for clean sands and gravels.....	13
Table 4. Relationship between RC and D_r	17
Table 5. Values of Janbu's modulus number (m) for silts.	20
Table 6. Values of Janbu's modulus number (m) for clays.	23
Table 7. Summary of hyperbolic stress-strain parameters.....	32
Table 8. Hyperbolic stress-strain parameters for drained conditions - based on laboratory test data.	34
Table 9. Hyperbolic stress-strain parameters for drained conditions - based on back analysis of footing settlements (from Byrne et al., 1987).....	36
Table 10. Values of $k = E_i / S_U$ for saturated clays.	49
Table 11. Poisson's ratio parameters G , F and d for drained conditions.	52
Table 12. Bulk modulus parameters K_b and m for drained conditions.....	54
Table 13. Bulk modulus parameters B_i and ϵ_U for drained conditions (from Boscardin et al., 1990).....	58
Table 14. Values of dilation angle, ψ for sands, calculated using equations (38) and (40) (after Bolton, 1986).....	61
Table 15. Ranges of permeability for different soil types.	68
Table 16. Ranges of permeability and methods of determining the permeability of soils (after Terzaghi and Peck, 1968).	69
Table A1. Conversion factors for length.....	88
Table A2. Conversion factors for force.....	89
Table A3. Conversion factors for stress.....	90
Table A4. Conversion factors for unit weight.	91
Table A5. Conversion factors for permeability.	92
Table A6. Conversion factors for coefficient of consolidation.	93
