

Table of Contents for

Settlement of Structures and Embankments Short Course Notes

Introduction - Mike Duncan and George Filz <ul style="list-style-type: none"> • Causes of settlements • Timing of settlement and settlement-sensitive construction • Case history -- Olympic Village Dormitory settlement
Tolerable settlements of buildings, bridges, and tanks - Mike Duncan <ul style="list-style-type: none"> • Methods of establishing criteria for allowable settlements • Settlement criteria for buildings, bridges, and tanks
Settlement of footings on sand - George Filz <ul style="list-style-type: none"> • Terzaghi and Peck (1967) method • D'Appolonia (1970) method • Duncan and Buchignani (1976) method • Burland and Burbidge (1985) method • Accuracy and reliability of methods (Tan and Duncan, 1991)
Settlement of foundations on sand, silt and residual soils – other methods - Mike Duncan <ul style="list-style-type: none"> • Schmertmann (1970, 1978) strain influence method • SchmertmannStrainInfluence 1.0 worksheet (Waisnor et al., 2001) • Schmertmann – Martin (1977) method for foundations on residual soils • Janbu (1963) method for foundations on silt
Compressibility of clay - George Filz <ul style="list-style-type: none"> • Interpretation of C_{ec}, C_{cr}, P_p from laboratory tests • Methods of checking parameter values • Case history (Peck, 1975) office building in Africa
Initial stresses and changes in stress - Mike Duncan <ul style="list-style-type: none"> • Geostatic stresses • Load spread and elastic stress distribution charts • Principle of superposition and St. Venant's Principle • ZSTRESS 2.0 computer program (Yang and Duncan, 2002)
Calculation of consolidation settlement magnitudes - George Filz <ul style="list-style-type: none"> • Computational model • Settlement calculations – hand and spreadsheet calculations • SETCALC 1.0 computer program (Yang and Duncan, 2003)

Table of Contents (cont.)

Time rate of consolidation - Mike Duncan <ul style="list-style-type: none">• Terzaghi theory of consolidation• Casagrande and Taylor methods of evaluating c_v• Applications and limitations of Terzaghi's theory
Loads of limited lateral extent, and consolidation with wick drains - George Filz <ul style="list-style-type: none">• Distortion settlement• Skempton and Bjerrum (1957) method for loads of limited lateral extent• Poulos and Davis (1972) solutions for 2D and axisymmetric drainage• Hansbo (1981) theory for wick drains
CONSOL 3.0 computer program (Duncan et al., 2002) - Mike Duncan <ul style="list-style-type: none">• Numerical methods for time rate calculations• CONSOL 3.0 features and options• CONSOL 3.0 input and output• CONSOL 3.0 examples
Additional practical aspects of foundation settlements -.George Filz <ul style="list-style-type: none">• Secondary compression of foundations on clay• Settlement of pile groups on sand and clay
Settlements of embankments and landfills - Mike Duncan and George Filz <ul style="list-style-type: none">• Settlements within embankments during construction• Secondary compression in embankments after construction• Settlements and swell due to wetting of embankments• San Diego fill case history of settlement due to wetting• Settlement of landfills during and after construction
