

Table of Contents

Introduction	1
Part I. A Distillation of Lessons Learned Regarding Construction Noise and Vibrations	2
A. Public perceptions, likelihood of damage, public relations and data collection ...	2
B. Blasting and its effects	8
C. Pile driving and deep dynamic compaction, and their effects.....	15
D. Case history database	17
Part II. Tolerable Limits of Construction Vibrations	21
Part III. Common Steps to Minimize Effects of Construction Noise and Vibration	31
Part IV. References and Useful Websites.....	33
REFERENCES.....	33
Online Sources of Information	36

List of Tables

Table 1 – Vibration Monitoring Instruments.....	6
Table 2 – Energies and Vibration Frequencies of Various Vibration Sources	16
Table 3 – Pile Driving Case Histories.....	18
Table 4 – Peak Particle Velocity Values–Swiss Standard.....	24
Table 5 – Building Factor Definition	25
Table 6 – Structure Factor Definition.....	26
Table 7 – Building Condition Factor Definition	26
Table 8 – Work Factor Definition.....	26

List of Figures

Figure 1 – Acceptable Peak Particle Velocities	4
Figure 2 – Variation of Peak Particle Velocities with Scaled Distance for Blasting.....	9
Figure 3 – Monitoring report for Example 1	11
Figure 4 – Monitoring report for Example 2.....	13
Figure 5 – Expected and Actual Peak Particle Velocities.....	14
Figure 6 – High Sensitivity Limiting Criteria.....	27
Figure 7 – Upper-Intermediate Sensitivity Limiting Criteria	28
Figure 8 – Intermediate Sensitivity Limiting Criteria	29
Figure 9 – Low Sensitivity Limiting Criteria.....	30
