

LECTURE NOTES
TABLE OF CONTENTS

<u>Contents</u>	<u>Page</u>
<u>Introduction, Seepage Problems, Darcy's Law, Permeability of Soils</u>	1- 1
Seepage Problems	1- 2
Failure of Hell Hole Dam	1- 3
Failure of Teton Dam	1- 5
Darcy's Law	1-13
Head	1-14
Permeability of Soils	1-15
Figure Showing Relationship Between Soil Type and Permeability	1-16
Methods of Estimating or measuring Permeability	1-17
Anisotropy of Permeability	1-17
Figure Showing Types of Permeameters	1-18
Velocity of Flow	1-19
Classes of Seepage Problems	1-19
Lecture Notes "Permeability of Soils"	1-20
Permeability of Soils	1-21
Values of Permeability	1-21
Methods of Measuring or Estimating Values of k	1-22
Estimating Values of k Based on Grain Size	1-22
Table of Ranges of Permeability and Methods of Determining the Permeability of Soils	1-23
Figure Showing Approximate Relationship Among Permeability, D_{50} , and C_u	1-24
Effects of Stratification	1-26
Figure Showing Variations of Permeability with Depth in a Sand Deposit	1-27
Laboratory Measurements of Permeability	1-28
Constant-Head Permeability Tests	1-28
Falling-Head Permeability Tests	1-28
Figure Showing Constant-Head Permeability Test	1-29
Figure Showing Falling-Head Permeability Test	1-30
Determining Permeability Values From Consolidation Test Results	1-31
Factors Affecting the Accuracy of Laboratory Tests	1-31
Field Measurements of Permeability	1-32
Borehole Flow Tests	1-32
Figure Showing Borehole Permeability Test	1-33
Field Pumping Tests	1-35
References	1-36
<u>Steady Two-Dimensional Flow, Flow Nets</u>	2- 1
Steady Flow in Two Dimensions	2- 2
Flow Nets	2- 2
Equations of Flow	2- 3
Methods of Solution	2- 5
Advantages of Flow Nets	2- 5
Advantages of Other Methods	2- 5

	<u>Page</u>
Figure Showing Flow Net Around a Single Row of Sheet Piles	2- 6
Figure Showing Flow Nets for Seepage Beneath a Concrete Dam	2- 7
Properties of Flow Nets	2- 8
Side Length Ratio	2- 9
Seepage Quantity From Flow Net	2- 9
Figure Showing Example Flow Nets for Sheetpile Wall	2-10
Figure Showing Example Flow Nets for Seepage Beneath a Concrete Dam	2-11
Determining n_f and n_d	2-12
Heads and Pore Pressures from Flow Nets	2-13
Determining Pore Pressures and Uplift Pressures	2-14
Caution About Determining Heads and Pore Pressures	2-14
Figure Showing Examples of Determining Information From Flow Nets	2-15
Determining Hydraulic Gradients From Flow Nets	2-16
Information From Flow Nets - Summary	2-16
Figure Showing Examples of Determining Hydraulic Gradients From Flow Nets	2-17
Figure Showing Examples of Determining Information From Flow Nets	2-18
<u>Flow Net Techniques</u>	3- 1
Flow Net Techniques	3- 2
Figures Showing Examples of Flow Net Construction	3- 3
Figure Showing Examples of Boundary Conditions	3- 4
Figure Showing Example of Flow Net Construction	3- 4
Mechanics	3- 5
Irregular Elements	3- 5
Learning From Subdivision	3- 9
Example Flow Net Analysis	3-10
Uplift Pressure	3-10
Hydraulic Gradient	3-11
Accuracy of Flow Net Analyses	3-11
<u>Anisotropic Soils, Free Surface Problems, Layered Soils</u>	
Flow Through Anisotropic Soils	4- 1
Determining Heads and Pore Pressures	4- 2
Example of Transformed Geometry	4- 5
Figure Showing Flow Net for Sheet Pile in Anisotropic Soil	4- 6
Figure Showing Flow Net Beneath Concrete Dam on Anisotropic Soil	4- 7
Figure Showing Flow Net for Anisotropic Embankment Layered Soils	4- 8
Figure Showing Flow Net Beneath Concrete Dam on Layered Soils	4- 9
	4-10

	<u>Page</u>
Figure Showing Flow Net Beneath Concrete Dam on Anisotropic Soil	4-10
Figure Showing Flow Net for an Earth Dam on a More Permeable Foundation	4-11
Equivalent Anisotropy of Stratified Soils	4-12
Flow Nets with Unknown Boundaries	4-15
End Conditions on the Line of Seepage	4-16
Figure Showing Entrance, Discharge, and Transfer Conditions of Line of Seepage	4-17
Methods of Estimating Position of Line of Seepage	4-18
Equivalent Entrance Point (P)	4-18
Line of Seepage by Flow Net	4-19
Theoretical Expressions	4-20
Dupuit's Solution	4-20
Tangent Method	4-21
Graphical Solution for Tangent Method	4-22
Sine Method	4-23
Locating Points on Line of Seepage	4-25
Confocal Parabola	4-26
Casagrande's Method	4-27
Seepage Quantity	4-28
Summary	4-29
Graphs for Locating the Line of Seepage in an Earth Dam (Carstens' and May's Charts)	4-30
Example Using Carstens' and May's Charts	4-32
<u>Erosion and Piping</u>	5- 1
Seepage Forces	5- 2
Seepage Force per Unit Volume	5- 3
Terzaghi's Analysis	5- 5
Weighted Filter Berm	5- 6
Weighted Creep Ratio	5- 8
Table of Safe Values for the Weighted Creep Ratio	5- 8
Table of Examples of the Consequences of Uncontrolled Seepage	5- 9
Problems Associated with Natural Formations	5-10
Recommendations for Preventing Piping on Natural Formations	5-12
Problems Associated with Construction of Embankments and Drains	5-12
Recommendations for Preventing Piping in Embankments and Around Drains	5-16
<u>Filter Criteria, Remedial Measures for Seepage Problems</u>	
Filter Criteria (Corps of Engineers)	6- 1
Sherard and Dunnigan Filter Criteria	6- 2
Sherard and Dunnigan Criteria	6- 3
Sizes of Perforations in Pipes (Corps of Engineers Criteria)	6- 3
	6- 4

	<u>Page</u>
Figure Showing Prevention of Piping by Filters	6- 5
Filters and Leakage Control in Embankment Dams by Sherard and Dunnigan	6- 6
Seepage Control Measurers	6-22
Cutoffs	6-22
Examples of Cutoffs	6-23
Examples of Drains	6-23
Seepage Blankets	6-25
Rock Foundation Grouting	6-25
Figure Showing Examples of Seepage Control Measures	6-26
Figure Showing Inclined and Horizontal Drains for Seepage Control	6-27
Figure Showing Examples of Filters	6-28
Figure Showing Example of Chimney and Blanket Drain Design	6-29
Figure Showing Influence of Size of Impervious Core on Escape Gradients in Zoned Dams	6-30
Figure Showing Study of Partially Penetrating Cutoffs	6-31
Figure Showing Typical Toe Drain Installation	6-32
Figure Showing Typical Relief Well	6-33
Figure Showing Retaining Wall Drainage System Used with Clay Backfill	6-34
Figure Showing Drainage Blanket Located Adjacent to Retaining Wall	6-35
Figure Showing Prefabricated Drainage System Used Adjacent to Retaining Wall	6-36
Figure Showing Drainage System Used to Prevent Frost Penetration Behind Retaining Wall	6-36
Table Summarizing Cutoff Methods for Seepage Control	6-37
<u>Flow Toward Wells</u>	7- 1
Flow Toward Wells	7- 2
Well Diameter	7- 2
Artesian Well Flow	7- 3
Boundary Conditions	7- 3
Gravity Well Flow	7- 5
Boundary Conditions	7- 6
Multiple Well Systems	7- 7
Artesian Flow	7- 7
Rule of Superposition	7- 8
Example of Multiple Well Artesian Flow	7-10
Multiple Well System - Gravity Flow	7-11
Gravity Flow	7-11
Rule of Superposition	7-12
Example of Multiple Well Gravity Flow	7-13
Ring of Wells	7-14
Well Adjacent to a River (Line Source)	7-15
Flow to a River	7-16
Superimposing Well Flow and Groundwater Flow	7-17

	<u>Page</u>
<u>Finite Element Analyses</u>	8- 1
Finite Element Analysis of Seepage	8- 2
One-Dimensional Flow	8- 2
Seepage Quantity	8- 3
Two-Dimensional Flow	8- 6
Seepage Quantity	8- 7
Anisotropic Materials	8- 9
Assembled Transmissibility Matrix	8-11
Modifying Equations for Boundary Conditions	8-12
Example of Modifying Equations	8-13
Finite Element Analyses of Free Surface Problems	8-15
Method 1 (Computer Program SEEP)	8-15
Method 2 (Any Computer Program)	8-16
Mesh Design	8-17
Example Mesh	8-17
Mesh Design	8-18
Sheet-Pile Cutoffs	8-19
End Boundaries	8-19
Deriving Information From Finite Element Results	8-20
<u>References</u>	9- 1
