

## Table of Contents

List of Figures.....	iii
List of Tables.....	vii
List of Symbols.....	ix
Introduction .....	1
SPT Equipment and Procedures.....	2
ASTM Specifications for the Standard Penetration Test (SPT).....	8
Standard Penetration Test Procedures Recommended by Various Authorities	10
Factors and Variables That Affect SPT Results.....	17
Corrections to Measured Blow Counts.....	26
Becker Penetration Test (BPT) Correlations with the SPT.....	35
Correlations Between SPT and Soil Properties.....	54
Relative Density of Sands.....	55
Friction Angles ( $\phi$ ) of Sands and Silts.....	67
Undrained Shear Strength ( $S_u$ ) of Clays.....	76
Undrained Residual Steady State Strengths ( $S_r$ ) of Sands.....	83
Soil Modulus Values.....	86
Correlations Between SPT and Foundation Performance.....	92
Settlement of Shallow Foundations on Sand.....	93
Settlement of Pile Groups in Sand.....	97
Bearing Capacity of Footings on Sand.....	100
Bearing Capacity of Piles in Sand.....	102
Bearing Capacity of Drilled Shafts.....	113
Correlations Between SPT and Liquefaction Potential of Sands.....	116
Appendix - ASTM Specification D 1586.....	120

Appendix B - Unit Conversions and Drill Rod Sizes.....	126
References.....	129

## List of Figures

Figure 1.	Donut hammer .....	3
Figure 2.	Safety hammer .....	4
Figure 3.	Automatic hammer .....	5
Figure 4.	SPT drilling and sampling configuration .....	6
Figure 5.	Split-barrel sampler for use with the SPT .....	7
Figure 6.	Definitions of the number of turns of rope and the angle $\alpha$ for CCW and CW rotation of the cathead .....	13
Figure 7.	Effect of energy ratio (on impact) on the number of turns of rope around the cathead .....	14
Figure 8.	Overburden correction factors .....	28
Figure 9.	Chart for values of $C_N$ .....	29
Figure 10.	Sample liner configuration .....	33
Figure 11.	Schematic diagram of Becker sampling operation .....	36
Figure 12.	Operating principle of double-acting atomized fuel injection diesel pile hammer .....	38
Figure 13.	Computed BPT vs. SPT correlation for different BPT casing shaft resistance .....	40
Figure 14.	Correction curves adopted to correct Becker blow counts to constant combustion curve adopted for correlation .....	41
Figure 15.	Examples illustrating the use of the correction curves in Fig. 14.....	42
Figure 16.	Correlation between corrected Becker and SPT blow counts.....	44
Figure 17.	Correlation between Becker and SPT blow counts developed from Canadian data obtained from Becker Drills, Inc.....	47
Figure 18.	Correlation between Becker and SPT blow counts developed by Sergeant, Hauskins, and Beckwith .....	48
Figure 19.	Correlations between Becker and SPT blow counts developed by Geotechnical Consultants, Inc. ....	49

Figure 20.	Correlation between Becker and SPT blow counts developed by Jones and Christensen .....	50
Figure 21.	Summary of correlations between Becker and SPT blow counts.....	51
Figure 22.	Conventional BPT mud-injection FBPT casing configurations.....	52
Figure 23.	FBPT-SPT correlations for 170mm and 220mm diameter shoes.....	53
Figure 24.	Variations of relative density with penetration resistance at different overburden pressures (Gibbs and Holtz).....	57
Figure 25.	Variations of relative density with penetration resistance at different overburden pressures (Meyerhof).....	58
Figure 26.	Variations of relative density with penetration resistance at different overburden pressures (Peck and Bazaraa) .....	59
Figure 27.	Variations of relative density with penetration resistance at different overburden pressures for fine sands (Yoshida and Ikemi) .	60
Figure 28.	Variations of relative density with penetration resistance at different overburden pressures for soils with a gravel fraction equal to 25% (Yoshida and Ikemi).....	61
Figure 29.	Variations of relative density with penetration resistance at different overburden pressures for soils with a gravel fraction equal to 50% (Yoshida and Ikemi).....	62
Figure 30.	Variations of relative density with penetration resistance at different overburden pressures (average for all cohesionless soils) (Yoshida and Ikemi).....	63
Figure 31.	Correlations between relative density and standard penetration resistance (Mitchell et al.).....	65
Figure 32.	Correlations between relative density and standard penetration resistance (NAVFAC).....	66
Figure 33.	Correlations between internal friction angle and penetration resistance.....	69
Figure 34.	Empirical correlation between friction angle of sands and normalized standard penetration blow count .....	71
Figure 35.	Estimation of the angle of shearing resistance of granular soils from standard penetration test results .....	72

Figure 36.	Angle of internal friction as a function of relative density for different types of sand and gravel.....	73
Figure 37.	Method for estimating effective friction angle from SPT blow count .	74
Figure 38.	Variations of friction angle with $N_{1,60}$ for silts and clays .....	75
Figure 39.	The variation of $S_u/N$ with plasticity index, PI.....	79
Figure 40.	Relationship between standard penetration blow count, $N$ and undrained shear strength, $S_u$ .....	80
Figure 41.	Relationship between standard penetration resistance and unconfined compressive strength, $q_u$ .....	81
Figure 42.	Estimated decrease in standard blow count with increasing clay sensitivity at constant undrained strength.....	82
Figure 43.	Some correlations between SPT blow count and unconfined compressive strength, $q_u$ in clays.....	82
Figure 44.	Relationship between corrected "clean sand" blow count, $N_{1,60-cs}$ and undrained residual strength, $S_r$ from case studies .....	84
Figure 45.	Relationship for compressibility modulus as a function of standard penetration resistance .....	88
Figure 46.	Correlations of stress-strain modulus and penetration resistance....	89
Figure 47.	Correlation between constrained modulus and average value of SPT blow count.....	90
Figure 48.	Shear modulus vs. $N$ values at very small strains.....	91
Figure 49.	Location of equivalent footing.....	98
Figure 50.	Empirical relation between ultimate point resistance of piles and standard penetration resistance in cohesionless soil .....	104
Figure 51.	Empirical relationships between ultimate skin friction of piles and penetration resistance in cohesionless soil .....	105
Figure 52.	Relation between ultimate point resistance of pile and depth in thin sand layer overlying weak soil .....	106
Figure 53.	Photograph of exhumed Franki piles showing expanded bases.....	108
Figure 54.	Empirical relation between ultimate point resistance and standard penetration resistance for long expanded-base piles .....	110

Figure 55. Empirical relation between ultimate point resistance and standard penetration resistance for short expanded-base piles ..... 110

Figure 56. Simplified base curve recommended for estimating CRR from SPT data along with empirical liquefaction data ..... 117

## List of Tables

Table 1.	Summary of the ASTM specification for the standard penetration test (D 1586) .....	9
Table 2.	Energy correction factors proposed by Seed et al. ....	11
Table 3.	Factors which may affect measured penetration resistance .....	18
Table 4.	Estimates of the change in N-values due to some common factors..	22
Table 5.	Estimates of the change in N-values due to various factors .....	23
Table 6.	Changes in N-values due to faulty equipment and non-standard procedures .....	24
Table 7.	Changes in N-values due to various factors .....	25
Table 8.	Overburden correction factors ( $C_N$ ).....	27
Table 9.	Energy correction factors ( $C_E$ ) .....	30
Table 10.	Ranges of energy correction factors ( $C_E$ ) .....	30
Table 11.	Rod length correction factors ( $C_R$ ) (Tokimatsu) .....	31
Table 12.	Rod length correction factors ( $C_R$ ) (Youd and Idriss).....	31
Table 13.	Borehole diameter correction factors ( $C_B$ ) .....	31
Table 14.	Liner correction factors ( $C_S$ ).....	32
Table 15.	Anvil correction factors ( $C_A$ ).....	32
Table 16.	Blow count frequency correction factors ( $C_{BF}$ ) .....	34
Table 17.	Hammer cushion correction factors ( $C_C$ ).....	34
Table 18.	Elevation corrections for bounce chamber pressures.....	43
Table 19.	Correlations between Becker and SPT blow counts .....	46
Table 20.	Correlations of relative density and SPT N-values .....	56
Table 21.	Relationship among relative density, penetration resistance, dry unit weight, and angle of internal friction of cohesionless soils .....	64
Table 22.	Correlations of internal friction angle and SPT N-values.....	68
Table 23.	Empirical values for $\phi$ , $D_r$ , and unit weight of granular soils based on the standard penetration number with corrections for depth and	

	for fine saturated sands .....	70
Table 24.	Approximate values of undrained shear strength for cohesive soils based on SPT blow counts .....	77
Table 25.	Approximate undrained shear strength for cohesive soils based on SPT blow counts .....	77
Table 26.	Empirical values for $q_u$ and consistency of cohesive soils based on the standard penetration number.....	78
Table 27.	Recommended fines correction for estimation of residual undrained strength by Seed-Harder and Stark-Mesri procedures .....	85
Table 28.	Equations for stress-strain modulus by the SPT method.....	87
Table 29.	Correlations of settlements of footings on sand and SPT N-values..	94
Table 30.	Width correction factor, $C_B$ .....	96
Table 31.	Load inclination factors, $R_l$ .....	101
Table 32.	Correlations of pile capacities and penetration resistance for piles in cohesionless soil.....	111
Table 33.	Correlations of pile capacities and penetration resistance for piles in cohesive soil .....	112
Table 34.	Summary of procedures for estimating shaft resistance of drilled shafts in sand.....	113
Table 35.	Summary of procedures for estimating base resistance of drilled shafts in sand.....	114
Table 36.	Fines content corrections.....	119
