

TABLE OF CONTENTS

INTRODUCTION	1
1.1. BACKGROUND	1
1.1.1. SHRP 2 R02	1
1.1.2. Information & Guidance System	1
1.2. SCOPE	2
1.3. ORGANIZATION	2
EMBANKMENTS OVER UNSTABLE SOILS	3
2.1. TYPICAL PROJECTS	3
2.2. Design Considerations.....	4
2.3. Foundation Treatment Technologies.....	4
2.3.1. Technologies Appropriate for Soft clay.....	5
2.3.2. Technologies Appropriate for Loose sand.....	7
2.3.3. Technologies Appropriate for Soft/loose silt.....	9
2.3.4. Layers of the above soil types.....	9
2.4. Embankment Technologies	9
2.4.1. Reinforced soil slopes	10
2.4.2. Geosynthetic reinforced embankments.....	10
2.4.3. Column supported embankments.....	10
2.4.4. Lightweight fill	11
2.4.5. Mechanically stabilized earth walls	12
2.5. Integration	12
CASE HISTORIES	15
3.1. Case History Summaries	15
3.1.1. Deep Mixing Methods and Prefabricated Vertical Drains	15
3.1.2. Lightweight Fills, Deep Mixing Methods and PVDs with Fill Preloading	16
3.1.3. Aggregate Columns and PVDs.....	17
3.1.4. Aggregate Columns and Deep Dynamic Compaction.....	18
3.1.5. Column Supported Embankments and Lightweight Fill	19
3.1.6. Vibrocompaction and Deep Dynamic Compaction.....	20
3.1.7. Vibrocompaction and Blast Densification.....	20
3.1.8. Deep Dynamic Compaction and MSE walls	21

3.1.9.	Vibrocompaction and Aggregate Columns	21
3.1.10.	Aggregate Columns and MSE Walls	22
3.1.11.	Deep Mixing Methods and MSE walls	23
3.1.12.	Multiple Technologies on I15	25
3.1.13.	MSE walls and Prefabricated Vertical Drains	26
3.1.14.	Reinforced Soil Slopes and Geotextile Encased Columns	27
3.2.	Other Case Histories	28
3.3.	Other possible combinations	29
	CONCLUSION	33
	REFERENCES	35
	APPENDIX	39
